SUPPLEMENT TO
REPORT NO.

THIS DOCUMENT CONTAINS INFORMATION AFFECTING THE NATIONAL DEFENSE OF THE UNITED STATES WITHIN THE MEANING OF THE ESPIONAGE ACT OF U.S.C. 51 AND 52, AS AMENDED. ITS TRANSMISSION OR THE REVELATION OF ITS CONTENTS IN ANY MANNER TO AN UNAUTHORIZED PERSON IS PROHIBITED BY LAW. REPRODUCTION OF THIS FORM IS PROHIBITED.

THIS IS UNEVALUATED INFORMATION

- 25X1 1. The original designation of Eisenhüttenkombinat West (Ironworks Combine West) for the plant project at Calbe (M 52/D 77) was changed to Eisenwerke West (Ironworks West). The construction of the plant has started. Two batteries of four furnaces each, totaling eight furnaces, are scheduled. They will be low shaft type furnaces (Niederschachtöfen).
- 25X1 2. The size of the furnaces had not been determined in January 1951 because the tests which were being made for the Eisenwerke West under the code name "Donauwerth" in the Maxhütte at Unterwellenborn had not yet been completed.
- 25X1 3. It was planned to charge the eight shaft furnaces of the Eisenwerke West with brown coal, low-temperature coke and bog iron ore. The plant is scheduled to produce only pig iron and will not do any further processing of the pig iron. *

25X1 Comment: Under the Five-Year Plan of the Russian Zone, the Eisenwerke West, usually abbreviated EWW, is scheduled to produce a total of 400,000 tons of pig iron by 1955. The production of 4,000 tons of pig iron is planned for 1951 and of 70,000 tons for 1952. All the pig iron will be made from iron ore produced by the EWW itself. The iron ore production of the EWW is scheduled to be 45,000 tons in 1951 and 210,000 tons in 1952.
